

10 Essential Math Terms Every Middle and High School Student Should Know!

Mathematics is an essential subject that students encounter throughout their middle and high school years. Understanding key math terms and concepts is crucial for students to excel in their math classes and develop problem-solving skills. In this article, we will explore ten essential math terms that every middle and high school student should know to succeed in their math education!

1. Algebra

Algebra is a branch of mathematics that deals with symbols and the rules for manipulating those symbols. It involves solving equations, graphing linear and quadratic functions, and analyzing patterns. Understanding algebra is fundamental for higher-level math courses and real-life applications.

2. Geometry

Geometry is the branch of mathematics that explores the properties and relationships of shapes, sizes, and dimensions. It involves studying angles, lines, triangles, polygons, and three-dimensional figures. Geometry is important for various fields, including architecture, engineering, and physics.

Basic Mathematical Terminology (Korean <-> English): Math terms for secondary school = middle, high school by Collin Choi (Kindle Edition)

★★★★★ 5 out of 5

Language : English

Print length : 126 pages

Screen Reader : Supported

3. Calculus

Calculus is a branch of mathematics that deals with change and motion. It includes concepts such as limits, derivatives, and integrals. Calculus is used extensively in advanced mathematics, physics, economics, and engineering.

4. Statistics

Statistics involves the collection, analysis, interpretation, presentation, and organization of data. Students learn to summarize data using measures such as mean, median, and mode, and they explore concepts like probability and correlation. Understanding statistics is essential for making informed decisions and drawing valid s.

5. Probability

Probability is the branch of mathematics that studies the likelihood of events occurring. Students learn to calculate probabilities using formulas and understand concepts like independent and dependent events, permutations, and combinations. Probability plays a significant role in fields like finance, insurance, and statistics.

6. Equations

An equation is a mathematical statement that contains an equal sign. Students learn to solve equations by isolating the variable and finding its value. Equations

are widely used in physics, chemistry, and engineering to describe various phenomena and relationships.

7. Ratios and Proportions

Ratios and proportions involve comparing quantities and finding the relationship between them. Students learn to solve problems involving proportions, rates, and percentages. Ratios and proportions are used in various real-life scenarios, such as scaling maps, mixing ingredients in recipes, and calculating discounts in shopping.

8. Exponents and Powers

Exponents and powers represent repeated multiplication. Students learn to simplify expressions with exponents, understand the laws of exponents, and solve problems involving powers. Exponents and powers are essential in scientific notations, expressing large or small numbers, and understanding growth and decay in various contexts.

9. Functions

Functions define the relationship between input and output values. Students learn to represent functions graphically, algebraically, and numerically. Understanding functions is crucial in graphing and analyzing linear, quadratic, and exponential equations, among other applications.

10. Pythagorean Theorem

The Pythagorean Theorem states that in a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the other two sides. Students learn to apply this theorem to solve problems involving right triangles and geometric figures. The Pythagorean Theorem is used in architecture, engineering, and various real-life applications.

These ten essential math terms provide a solid foundation for middle and high school students to build their math skills and understanding. Mastering these concepts is key to success in math classes and future careers that require mathematical proficiency. By becoming familiar with these terms, students can approach math with confidence and unlock the endless possibilities offered by mathematical knowledge!

Over 100 pages of math exercise notebook is added

Objective of this book) Korean students who enter a secondary school (middle or high school) or universities will suffer from difficulty to understand the mathematical terms in English.

This short hand book can help them to easily understand the basic terms and then they can keep having interest in mathematics.

이 책은 중학교, 고등학교, 대학교에 입학하는 한국 학생들이 영어로 이해하기 어려운 수학적 용어를 쉽게 이해할 수 있도록 도와주는 책입니다. 이 책을 통해 수학적 용어를 쉽게 이해할 수 있고, 수학에 대한 흥미를 유지할 수 있습니다.

[Index]

Part I. How to study math abroad

Part II. □□□ □□□ (□□□ -> □□)

Chapter 1: □□, □□ □ (Set, Numbers and Expressions)

Chapter 2: □□□□ □□□, □□(Equations and Inequalities, functions)

Chapter 3: □□□ □□ (Geometry and Locus)

Chapter 4: □□□ □□, □□□, □□ (Exponent and Logarithm, Trigonometric ratio, probability)

Chapter 5: □□, □□, □□□(Sequences, Series, calculus)

Part III. □□ □□

Part IV. □□ -> □□□ □□

+ □□ □□ □□□(Math exercise notebook) over 100 pages

*From the book

In a limited environment, with a limited method of teaching, increasing children's ability to concentrate on math is key.

1. Let them sleep well. Simply let them take a nap during break time and concentrate on the class later.

2. Quality rather than quantity! There is no chance of bettering the math skills of children in class when they have sleepy brains.

3. Prevention of severe exercise before sleeping! Do not let them watch movies or soap operas before sleeping!

4. No computer games, phone usage in the two hours before bed time

5. The common computer shall be moved to the living room. Downgrade to a 2G phone. I would like to write a book on the subject of whether a smart-phone is really necessary for children. A 2G phone is enough.

6. Dress code is also important! When children study in sleeping clothes, the sleep will come to them. A little bit uncomfortable or even tight clothes will be better.

7. Hang a white board in the children's room or study room. They will write one English word or one mathematical formula on the board, in order to memorize.

8. Can you buy a standing desk? Standing while studying can help children concentrate. At the same time, leg strength can be increased, and belly fat will be reduced.*

*Strengths of this book

When Korean students want to have a good score at SAT test, IB or IGSCE math test, they would better study math terminology in Korean and English simultaneously. This book also can be applicable to the students who want to participate in math competitions globally.
