Preparing for the Unknown

The journey required meticulous planning and careful consideration of every potential obstacle. Nansen assembled a team of six men, each equipped with the necessary skills and temperament to brave the harsh Scandinavian climate. They meticulously packed provisions, essential tools, and warm clothing, preparing for the unknown challenges that awaited them.

The Journey Begins

On June 6th, 1888, Nansen and his crew set sail from Godthab (now Nuuk), the capital of Greenland. Their initial plan was to land on the uninhabited east coast and traverse the vast icy wasteland, reaching the west coast. Little did they know, an unforeseen obstacle would force them to adapt their strategy.

Adrift on the Icy Sea

As the crew approached the east coast, their vessel, the *Fram*, became trapped in the ice near the small settlement of Angmagssalik. Nansen saw an opportunity in this apparent setback. Rather than wallowing in despair, he made a bold decision to abandon the ship and start their trek from where they were, using skis and sleds to navigate the treacherous terrain.

A Race Against Time

The crew had estimated the journey would take them 200 days, but the harsh reality soon set in. Battling swirling storms, sub-zero temperatures, and frozen fjords, progress was painfully slow. They were soon faced with dwindling supplies, adding a race against time to an already grueling expedition.

Innovative Survival Techniques

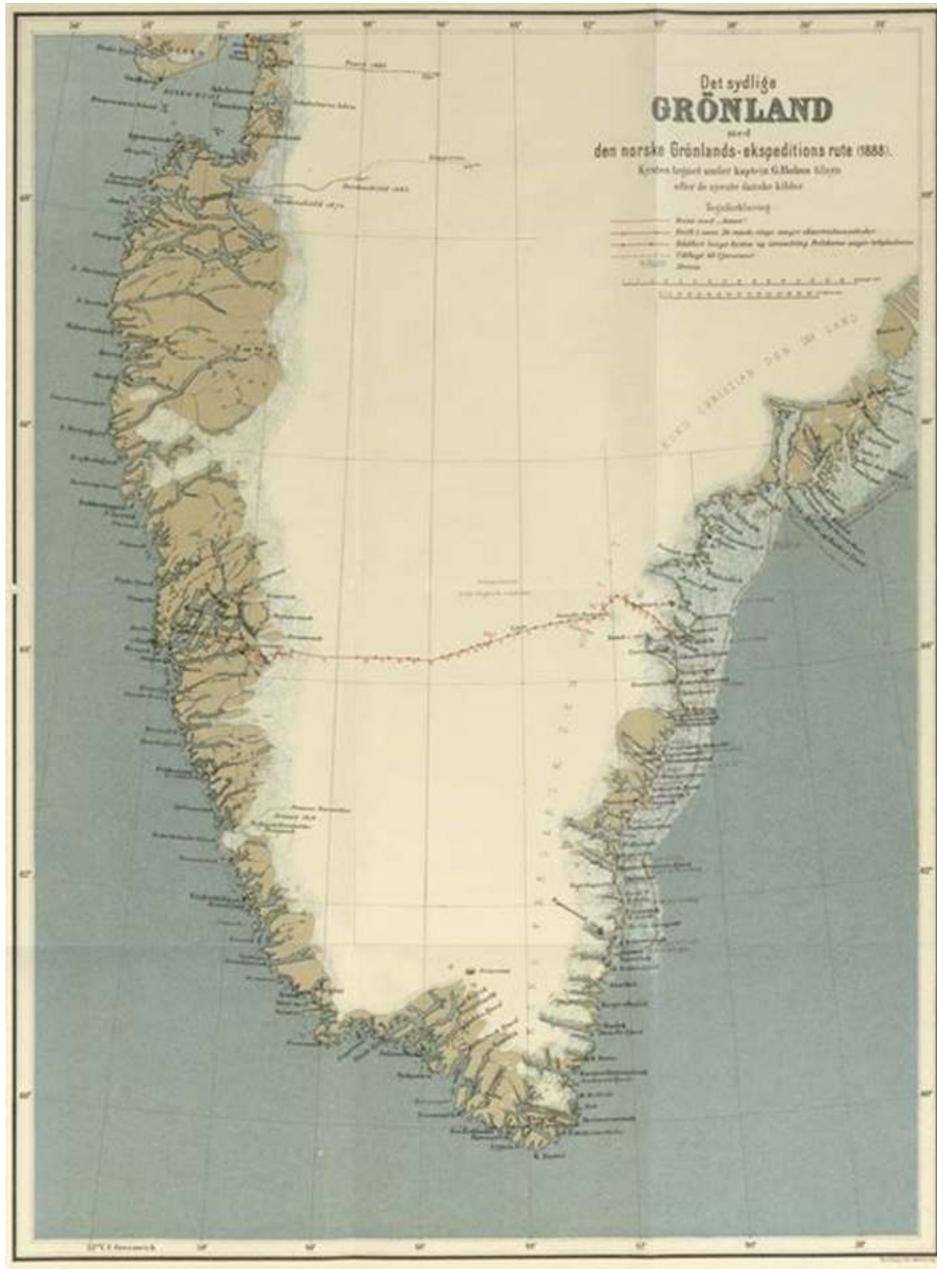

Nansen's scientific background proved invaluable during their desperate struggle for survival. They employed ingenious techniques to survive the harsh conditions. For instance, they invented an innovative cooking method using a mixture of boiling seawater and seal blubber, ensuring they could make the most of their limited food supplies.

Encountering the Unknown

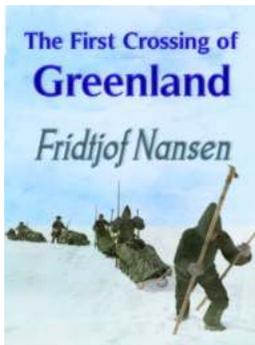

Throughout their journey, Nansen and his crew encountered numerous challenges, including treacherous crevasses and steep icefalls. Their unyielding determination and unwavering spirit drove them forward, as they became the first human beings to set foot in vast, unexplored areas of Greenland.

Triumph Against All Odds

After an arduous 49-day expedition, Nansen and his crew reached the west coast of Greenland, marking the first successful crossing of this icy continent. Their incredible feat left a lasting legacy, inspiring future explorers and shaping our understanding of one of the world's most unforgiving environments.

The first crossing of Greenland by Fridtjof Nansen and his brave crew is a testament to the indomitable human spirit. Their story captivates and inspires, reminding us of the incredible feats that can be achieved when determination, resilience, and teamwork align against seemingly insurmountable odds. The legacy of this extraordinary journey continues to resonate with explorers and adventurers to this day, reminding us that the world still holds countless mysteries waiting to be unraveled.

There was no choice of routes, "forward" being the only word. The order would be: — "Death or the west coast of Greenland"

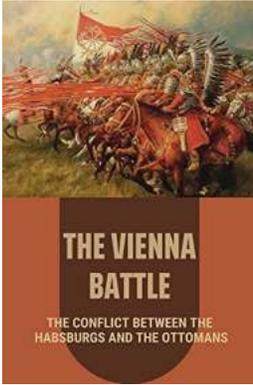

With his five companions, Nansen rowed ashore on the desolate east coast of Greenland. There was no turning back - they had to succeed in their goal of traversing the inland ice to the inhabited west coast or perish.

They were pioneers - in exploring the inland ice, and in creating the concept of the modern polar expedition; inventing much of the required equipment in the process.

However, this book is doubly interesting because of the meeting of Nansen and his team with the Greenlanders, and how they recognized that they had much to learn from them about living in the polar wastes.

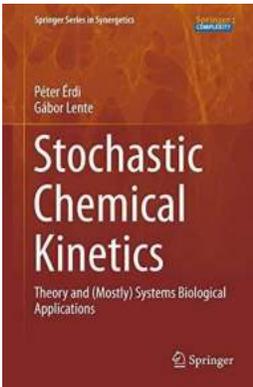

This was Fridtjof Nansen's first expedition, revealing him not only to be an eminent scientist and explorer, but also a fine author.

This book is based on the slightly abridged single-volume version. It is fully proof-read, with all original illustrations.
