The future of the world's ice is at a critical juncture marked by international debate about climate change and almost daily reports about glaciers and ice shelves breaking, oceans rising, and temperatures spiking across the globe. For Beth Peterson, these changing landscapes and the public discourse surrounding them became personal.

A few months after Peterson moved to a tiny village on the edge of Europe's largest glacier, things began to disappear. The glacier was melting at breakneck pace, and people she knew vanished: her professor went missing while summiting a volcano in Japan, and a friend wandered off a mountain trail in Norway. Finally, Peterson took a harrowing forty-foot fall while ice climbing.

Peterson's effort to make sense of these losses led to travels across Scandinavia, Italy, England and back to the United States. She visited a cryonics institute, an ice core lab, a wunderkammer, Wittgenstein's cabin, and other museums and libraries. She spoke with historians, guides, and scientists in search of answers. Her search for a noted glacier museum in Norway led to news that the renowned building had set on fire in the middle of the night before and burned to the ground.

Dispatches from the End of Ice is part science, part lyric essay, and part research reportage--all structured around a series of found artifacts (a map, a museum, an inventory, a book) in an attempt to understand the idea of disappearance. It is a brilliant synthesis of science, storytelling, and research in the spirit of essayists like Robert Macfarlane, John McPhee, and Joni Tevis. Peterson's work veers into numerous terrains, orbiting the idea of vanishing and the taxonomies of loss both in an unstable world and in our individual lives.
