The color green is at the center of the spectrum. For earlier writers like Emily Dickinson or William Blake, the green world was a space of haunting, irreconcilable, opposites: life and death, human and vegetal, innocence and experience. In these essays, letters, repetitions, and experiments, poet and scholar Gillian Osborne adds a third, contemporary, term: the environment as both vital and ailing. This is nature writing outside of adventure or argument, ecological thinking as a space of shared homemaking: reading, writing, and living in vicinity with others.
