Experts believe that the biblical accounts of the Exodus align with archaeological evidence, providing significant credibility to the story. The excavation of ancient sites like Kahun, Pithom, and Avaris revealed traces of Semitic habitation, pottery, and hieroglyphics consistent with the Israelite presence around the time described in the Exodus. Additionally, the Merneptah Stele, an ancient Egyptian inscription dating back to the 13th century BCE, mentions the presence of a people called "Israel" in Canaan, further confirming their existence.

## **Artifacts of Freedom: Traces of the Journey**

The journey out of Egypt was a momentous event that shaped the course of human civilization. As the Israelites traversed arid lands, they carried with them artifacts that offer invaluable insights into their experiences.

One of the most significant findings is the discovery of the Ipuwer Papyrus. This ancient Egyptian document describes a series of disasters striking the land, reminiscent of the plagues mentioned in the Book of Exodus. The papyrus also depicts social unrest and chaos, corresponding to the upheaval caused by the departure of the Israelites.

Another remarkable artifact is the Merneptah Stele, as previously mentioned. Not only does it provide an early reference to the Israelites, but it also mentions their defeat, aligning with the story of their escape.

Archaeologists have also unearthed fragments of pottery and flint tools along the possible route of the journey. These artifacts further support the narrative by depicting the nomadic lifestyle of the Israelites and their reliance on simple tools for survival.

## **The Exodus Route: Tracing the Footsteps**

Pinpointing the exact route taken during the journey is a task that has intrigued researchers for centuries. While precise locations remain debated, evidence suggests several potential routes.

A compelling hypothesis suggests that the Israelites traveled along the northern route, passing through the Eastern Nile Delta, before crossing the Red Sea's shallow waters. This theory gains support from the discovery of numerous campsites and wells that align with the biblical narrative.

Moreover, recent underwater archaeological expeditions have found intriguing remains at the present-day site known as the "Reed Sea." These findings include coral-encrusted chariot wheels, bones, and charred remains, potentially lending credibility to the miraculous event of the Red Sea parting during the Israelites' escape.

The archaeological evidence behind the journey out of Egypt provides a compelling case for the historical validity of this remarkable event. From the convergence of biblical accounts and historical facts to the discovery of artifacts that offer glimpses into the Israelites' experiences, archaeology plays a vital role in unraveling the mystery.

As our understanding of ancient civilizations continues to evolve, the archaeological evidence provides tangible proof of an event that has captured our imagination for millennia. The journey out of Egypt remains an extraordinary tale, with the artifacts and traces left behind serving as a testament to the resilience and determination of a people searching for freedom.

Recent archaeological findings confirm Osman's 25-year-old discovery of the location of the city of the Exodus

- Explains why modern scholars have been unable to find the city of the Exodus: they are looking in the wrong historical period and thus the wrong region of Egypt
- Details the author's extensive research on Hebrew scriptures and ancient Egyptian texts and records, which allowed him to pinpoint the Exodus site
- Reveals his effort to have his finding confirmed by the Egyptian government, including his debates with Zahi Hawass, Egyptian Minister for Antiquities Affairs

When the first archaeologists visited Egypt in the late 1800s, they arrived in the eastern Nile Delta to verify the events described in the biblical Book of Exodus. Several locations believed to be the city of the Exodus were found but all were later rejected for lack of evidence. This led many scholars to dismiss the Exodus narrative merely as a myth that borrowed from accounts of the Hyksos expulsion from Egypt. But as Ahmed Osman shows, the events of Exodus have a historical basis and the ruins of the ancient city of Zarw, where the Road to Canaan began, have been found.

Drawing on decades of research as well as recent archaeological findings in Egypt, Ahmed Osman reveals the exact location of the lost city of the Exodus as well as his 25-year effort to have this finding confirmed by the Egyptian government, including his heated debates with Zahi Hawass, former Egyptian Minister for Antiquities Affairs. He explains why modern scholars have been unable to find the city of the Exodus: they are looking in the wrong historical period and thus the wrong region of Egypt. He details his extensive research on the Pentateuch of the Hebrew scriptures, the historical scenes recorded in the great hall of Karnak, and other ancient source texts, which allowed him to pinpoint

the Exodus site after he discovered that the Exodus happened not during the pharaonic reign of Ramses II but during that of his grandfather Ramses I.

Osman concluded that the biblical city of the Exodus was to be found at Tell Heboua at the ruins of the fortified city of Zarw, the royal city of Ramses I--far from the Exodus locations theorized by previous archaeologists and scholars. In 2012, after 20 years of archaeological work, the location of Zarw was confirmed by Egyptian officials exactly where Osman said it would be 25 years ago. Thus, Osman shows that, time and again, if we take the creators of the source texts at their word, they will prove to be right.
