

The Ultimate Database of Histopathological Diagnoses for Breeds 2010-2014: Uncover Fascinating Insights About Your Pet's Health!

:

Have you ever wondered about the unique health conditions that different dog breeds may be predisposed to? If so, you're in for a treat! We are thrilled to present to you the most extensive and insightful database of histopathological diagnoses based on dog breeds from 2010 to 2014. This comprehensive collection of data will not only satisfy your curiosity but also shed light on potential health concerns and help you provide the best care for your beloved furry friends. Join us on this exciting journey through the fascinating world of canine histopathology!

Understanding Histopathological Diagnosis:

Histopathological diagnosis refers to the examination of tissue samples under a microscope to identify any abnormalities or diseases. It involves analyzing the structure, composition, and behavior of cells and tissues to determine the root cause of health issues. This diagnostic technique is widely used by veterinary pathologists to unveil potential diseases and guide treatment plans for animals.

The Significance of Breed-specific Histopathological Data:

Every dog breed has its unique genetic makeup, which may make them more susceptible to certain diseases or health conditions. By studying breed-specific histopathological data, we can gain valuable insights into the prevalence and nature of these conditions. Such information enables veterinarians and pet owners to monitor, prevent, and treat potential health concerns more effectively.

Building the Database - 2010 to 2014:

Collecting and analyzing histopathological data across different breeds is a time-consuming and complex task. However, our team of dedicated researchers and veterinarians has meticulously compiled this comprehensive database, covering the period from 2010 to 2014. The database consists of thousands of cases, ensuring its reliability and accuracy.

Key Findings and Insights:

Let's delve into some of the most intriguing and crucial findings from our database:

1. Prevalence of Cancerous Tumors:

Our data reveals important information about the occurrence of cancerous tumors in specific dog breeds. For example, we found a higher incidence of mast cell tumors in Boxers and Bulldogs, highlighting the need for regular monitoring and early detection in these breeds.

2. Respiratory Disorders:

Certain breeds, such as Bulldogs and Pugs, are more prone to respiratory disorders like brachycephalic syndrome. Our database provides a better understanding of the frequency and severity of these conditions, allowing for better management and treatment.

3. Cardiovascular Issues:

From our data, it's evident that some dog breeds, such as Doberman Pinschers and Great Danes, have a higher predisposition to cardiovascular problems like dilated cardiomyopathy. Identifying these tendencies empowers veterinarians to implement early interventions and prolong the lives of affected pets.

4. Skin Diseases:

Intriguingly, our data indicates that certain breeds, including Labradors and German Shepherds, are more prone to skin diseases like atopic dermatitis and pyoderma. Learning about breed-specific vulnerabilities aids in optimizing preventive care and targeted treatment approaches.

Unlocking the Potential of the Database:

Our ultimate goal is to empower pet owners, veterinarians, and researchers with this comprehensive database of histopathological diagnoses. By understanding the unique health concerns and predispositions of specific dog breeds, we can collectively work towards providing the best possible care and improving overall canine well-being.

:

The database of histopathological diagnoses based on dog breeds from 2010 to 2014 offers a treasure trove of insights and discoveries. Unraveling the mysteries

of breed-specific health conditions has never been easier, thanks to this comprehensive resource. So, dive into the fascinating world of canine histopathology and unlock a world of potential for your furry companions!

【 First to market! Pathological diagnostic data collection about Shiba, Akita and popular dogs in Japan! 】

In Japan, there are many people interested in pets. In the world, Shiba and Akita are rare breeds, but the popularity is rising. They are Japanese native dogs. However, the current state of pet care in Japan and the disease tendency of Japanese dogs are not well known.

Therefore, our Japanese veterinarians analyzed the current state in Japan and created data books. We strongly support data-backed treatments and your market development.

【 Points 】

1. Reliable data

We collected data on 110,000 dogs, focusing on 36 popular breeds in Japan. We, Japanese veterinarians analyzed them and found their disease trend.

2. Graphical data book

We compiled the disease trends into max 3 types of graphs and tables for each organ. All graphs are graphical in full color. It will be good when you contact pet owners or customers.

3. Analysis from various viewpoints

We analyzed the disease tendency for each organ from various viewpoints, such as dog breeds or age. From abundant perspective, you can investigate the illness of your patient.

【 Dog breeds collected in our books 】

Vol. 1: Total data of 36 dog breeds

Vol. 2: Dachshund, Italian Grayhound, Doberman

Vol. 3: Shih Tzu, Pug, Pekingese

Vol. 4: Yorkshire Terrier, Jack Russell Terrier, West Highland White Terrier, Boston Terrier

Vol. 5: Welsh Corgi, Shetland Sheepdog, German Shepherd Dog

Vol. 7: Golden Retriever, Flat Coated Retriever, Barneys Mountain Dog, Great Pyrenees

Vol. 8: Poodle, Papillon, Bichon Frise

Vol. 9: Miniature Schnauzer, French Bulldog, Cavalier King Charles Spaniel

Vol. 10: Shiba, Miniature Pinscher, Akita, Siberian Husky

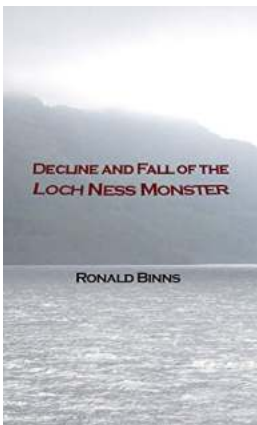

Vol. 11: Labrador Retriever, American Cocker Spaniel, English Cocker Spaniel

Vol. 12: Chihuahuas, Martinez, Bulldog
