The Challenge with Modifying Adjuncts

Traditionally, modifying adjuncts in Internet Explorer (IE) has been a complex and time-consuming task. The limited capabilities of older versions of IE made it challenging for developers to customize adjuncts effectively. This created a significant hurdle for interface explorations, hindering the creation of innovative and user-friendly designs.

The New Method: Exploring IE's Potential

With the emergence of modern web technologies and the latest updates in IE, a new method for modifying adjuncts in interface explorations has become

available. This method harnesses the power of HTML to create dynamic and interactive adjuncts seamlessly.

Unlike the notion of "argument" that is central to modern linguistic theorizing, the phenomena that are commonly subsumed under the complementary notion "adjunct" so far have not attracted the attention they deserve. In this volume, leading experts in the field present current approaches to the grammar and pragmatics of adjuncts. The contributions scrutinize i.a. the argument-adjunct distinction, specify conditions of adjunct placement, discuss compositionality issues, and propose new analyses of event-related modification. They are meant to shed new light on an area of linguistic structure that is deemed to be notoriously overlooked.
