The plan of the book is to make the study of physics a passion for any body, no matter what his background or level. We have tried to explore the most innocent concepts of physics and it's laws in un conventional manner and any student without bias or preconceived notions, will be able to derive most out of the book and add to it's treasures after reading.

The banned concepts or those thought imaginary have been evolved and covered in simple way to give them concrete and explicable shape.

First we introduce the coordinate system in free form and see how it evolves and gives us the most complex quantities or equations of physics in simple way and with meaning. No bindings or measured vessels have been employed to kill the noble concepts and laws.

Next we reap the treasures through the equations which are simple and follow like a magic wand from system.

We then see how the most intricate questions of physics get answered and what a pleasure it is to study it for its own sake.
