As we look to the future, one of the infantry's missions will continue to be to maintain the capability and readiness to defeat large enemy armor forces. In accomplishing this mission the infantry will be supported by all available means; to include at various times, tactical aircraft, field artillery, attack helicopters (some armed with a TOW), and tanks. But all of this support does not diminish the requirement that the infantryman be highly skilled and confident in using his organic antiarmor weapons and expedient devices to slow, canalize, and destroy armor. Intensive training is required in order to develop such skill and confidence. Commanders and leaders must be resourceful and imaginative in training their infantrymen and employing the proper weapons, field expedients, tactics, and techniques so that the infantry will defeat enemy armor on any future battlefield
